

TABU BY GRYPHON AT INTEGRATED AMPLIFIER

- Full remote controlled operation
- Zero negative feedback
- Military spec. double-sided circuit boards
- 1 balanced input with PCB-mounted gold-plated Neutric XLR sockets
- 4 single-ended inputs with PCB-mounted gold-plated WBT phono sockets
- Heavy-duty gold-plated speaker terminals
- Ultra-short signal path
- Minimal internal wiring
- Non-invasive protection system
- Designed and built in Denmark

THE ROOTS OF TABU BY GRYPHON

The Tabu brand joins its "mother" brand Gryphon Audio Designs at the vanguard of home entertainment design and engineering. Founded in 1986, Gryphon Audio Designs achieved immediate and on-going global acclaim for the state of the art performance, intuitive ergonomics and stunning beauty of the cost-no-object Gryphon preamplifiers and power amplifiers.

Now, the Tabu by Gryphon line of audio components reaps the benefits of the vast body of technical knowledge and experience accumulated by Gryphon at the cutting edge of audio engineering. Through an ingenious combination of economies of scale and radical thinking, Tabu by Gryphon makes the exceptional quality of Gryphon Audio Designs accessible to a greater number of enthusiasts.

Designed and built by the same team of award-winning engineers responsible for the conceptualization, exterior design, audio circuit design and final voicing of every single Gryphon product since the very beginning, Tabu by Gryphon sets a new highwater mark for sonic realism and emotional involvement in home entertainment.

The very first product from Tabu By Gryphon received high praise indeed from the world audio press. Remarks such as "Leaving aside its Rolls Royce build and cosmetics, sound quality alone makes the Gryphon Tabu the best integrated amplifier in the world" are typical of the response of critical, independent audio journalists in Germany, France, Denmark, the USA and the Far East to this breakthrough product.

Now, the level of performance which another audio journal described as "very close to the best pre/power combinations we have ever heard" is accessible to even more enthusiasts in the Tabu AT integrated amplifier. With a power output of 80 Watts per channel and a more compact heatsink, the Tabu AT delivers Tabu by Gryphon sonic performance at a highly attractive price in a lushly styled slim line design.

A Definite Family Resemblance

Like Gryphon's famous state of the art models and the original Tabu by Gryphon integrated amplifier, the Tabu AT features zero negative feedback to eliminate intermodulation distortion, ultra-wide bandwidth for unconditional stability, relatively high Class A bias for sonic purity and a potent power supply and very short signal path. The high-current output stages incorporate four fast Sanken transistors per channel for exceptional speed and dynamic range.

Like every Tabu and Gryphon product, the Tabu AT is assembled and extensively tested and inspected in-house, employing the finest parts sourced from manufacturers approved for Mil. spec production and actively involved in the design and production of scientific and medical equipment where precision and reliability is a matter of life and death.

The Tabu AT stands ready to carve out a sterling reputation for itself, just like all its big brothers and sisters. See, feel and hear the Tabu AT at your local Gryphon dealer.
